Detect, investigate and respond to emerging threats in real time, with Cyber MXDR.

We gather, correlate and analyse your endpoint data, software telemetry and alert notifications to **detect** misconfigurations, vulnerabilities, suspicious activities, compromise attempts and cyberthreats within your IT environment.

We leverage AI, automation and Big Data to filter out false positives and alert noise so we can **investigate** and triage any incidents, and proactively hunt for undiscovered threats that could damage, risk or otherwise harm your resources.

We apply proven processes and powerful decision-making algorithms to **remediate** your security issues automatically, at scale. We can also collect data for forensic examinations, and provide actionable insights and guidance to your teams.

Extend your security capabilities with Cyber MXDR by BUI.
